1

Define your problem statement

The goal is to accurately predict the Length of Stay for each patient on case by case basis so that the Hospitals can use this information for optimal resource allocation and better functioning. The length of stay is divided into 11 different classes ranging from 0-10 days to more than 100 days

Key rules of brainstorming

To run an smooth and productive session

Stay in topic.

Defer judgment.

Go for volume.

Encourage wild ideas.

Listen to others.

If possible, be visual.

2

Brainstorm

Write down any ideas that come to mind that address your problem statement.

3

Group ideas

Providing quality training data
Eliminating bias in data
Developing quality tools while preserving patient privacy

[20 minutes](#)

Above are some of the emerging strategies for advanced data analytics in healthcare organizations. Every hospital should follow these strategies. We hope that our method will inspire healthcare organizations to adopt advanced data analytics tools. They should have a quality training database. It is significant for a perfect Dataset of a hospital and gaining the trust of patients.

4

Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.
