**Table-1 : Components & Technologies:**

| S.No | Component                       | Description   | Technology   |
|------|---------------------------------|---|--|
| 1.   | User Interface                  | How user interacts with application e.g. Web UI, Mobile App, Chatbot etc.                                     | HTML, CSS, JavaScript  |
| 2.   | Application Logic-1             | Logic for a process in the application  | Python   |
| 3.   | Application Logic-2             | Logic for a process in the application  | IBM Watson Assistant   |
| 4.   | Database                        | Data Type, Configurations etc.  | MySQL  |
| 5.   | Cloud Database                  | Database Service on Cloud   | IBM Cloud etc.   |
| 6.   | File Storage                    | File storage requirements   | IBM Block Storage or Other Storage Service or Local Filesystem |
| 7.   | External API-1                  | Purpose of External API used in the application   | Aadhar API, etc.   |
| 8.   | Machine Learning Model          | Purpose of Machine Learning Model   | Regression Model, etc.   |
| 9.   | Infrastructure (Server / Cloud) | Application Deployment on Local System / Cloud<br>Local Server Configuration:<br>Cloud Server Configuration : | Local, Cloud Foundry, etc.                                     |

**Table-2: Application Characteristics:**

| S.No | Characteristics          | Description   | Technology   |
|------|--------------------------|---|--|
| 1.   | Open-Source Frameworks   | List the open-source frameworks used  | Python   |
| 2.   | Security Implementations | List all the security / access controls implemented, use of firewalls etc.  | Encryption,Firewall,Antivirus  |
| 3.   | Scalable Architecture    | Justify the scalability of architecture (3 – tier, Micro-services)  | Supports higher workloads  |
| 4.   | Availability             | Justify the availability of application (e.g. use of load balancers, distributed servers etc.)                            | High availability enables your IT infrastructure to<br><br>continue functioning even when some of its components fail.                                     |
| 5.   | Performance              | Design consideration for the performance of the application (number of requests per sec, use of Cache, use of CDN's) etc. | A field of practice that uses various tools, processes, and ideas in a scientific manner to improve the desired outcomes of individuals and organizations. |
